CHAPTER 1

Tank production

We design and manufacture stainless steel tanks for the dairy and food industries.

Our plant handles the entire process – from rolling and welding shells and heads, through the installation of hygienic connections, insulation, and fittings, to leak testing and preparation for transport.

We guarantee repeatable tank geometry, high weld hygiene, and efficient on-site assembly.

CHAPTER 2

Installation on site

We carry out complete stainless steel installation assemblies on site: foundation and anchoring of tanks, prefabrication and welding of hygienic pipelines, assembly of valve islands, platforms, and process equipment.

We work safely in operating plants, complying with health and safety and production hygiene requirements. We provide FAT/SAT tests and complete as-built documentation.

CHAPTER 3

Tank servicing and upgrades

We repair and modernize stainless steel process tanks.

We perform general repairs, replace agitators and seals, regenerate jackets and bottoms, and add nozzles, sensors, and drives.

We carry out the work in our workshop or at the customer's site, with leak tests and full as-built documentation.

CHAPTER 4

CIP systems

We design, build, and commission complete CIP stations. We ensure line hygiene, repeatable cleaning cycles, and economical consumption of water, energy, and chemicals. The scope includes solution tanks, heaters and exchangers, valve islands, dosing and recovery, PLC/SCADA automation, process integration, and FAT/SAT with recipe validation.

CHAPTER 5

Custom devices

We design and manufacture custom stainless steel equipment.

We supply complete modules and machines tailored to your space, process, and quality requirements.

We work from concept and documentation to installation and commissioning on site.

CHAPTER 6

Valve islands

We design and build valve islands for hygienic control of process media flow.

We use CIP-friendly designs, prepared for integration with automation (PLC/HMI) and documented in accordance with CE requirements.

We offer prefabrication, FAT/SAT testing, on-site installation, and service.

CHAPTER 7

Structures and platforms

We design and manufacture stainless steel platforms for production plants. They provide safe access to machines, installations, and equipment. Each project is tailored to the layout of the line and working conditions. We guarantee high quality workmanship and timely delivery.

CHAPTER 8

Tanks for pharmaceuticals

We manufacture stainless steel tanks
- process, buffer, and storage tanks
with CIP/SIP options.

Implementation in accordance with
GMP requirements, full material
traceability, and complete quality
documentation.
